

Responsive Header Menu – IA

First of all, when I landed and navigate thru this website my thoughts were about the overuse of text and heaps of data displayed. Probably a "less is more" design would be a great idea.

The header might be a bit confusing for some users as there are different search boxes and dropdown selectables, which can confuse some of the visitors. A review and redesign of the site will definitely improve the User Experience/User Interface (UI/UX).

The header is quite relevant / important in this website, but in my opinion exceeds in terms of average height compared to other related websites.

Hence, I would unify header-partners and header in one, and below, the black & blue header menu.

The blue submenu should always have the same height, regardless the current category.

In a first approach I would re-design a 6 elements menu as follow:

Practitioners

Training

Products

Rooms/Jobs

Articles

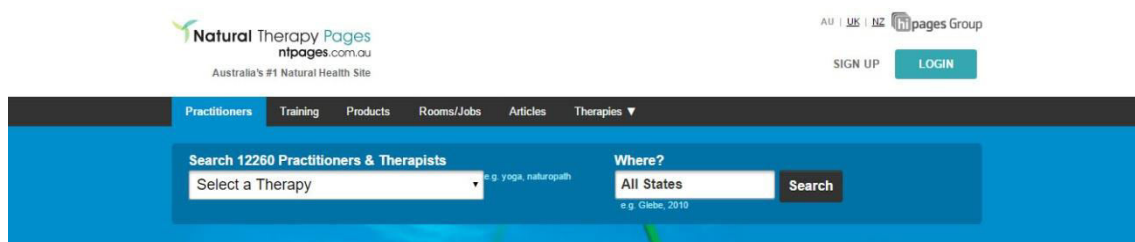

Therapies

In a second approach I will place **List of business** somewhere else in the content page as it is on the footer too. No need to keep in the header longer.

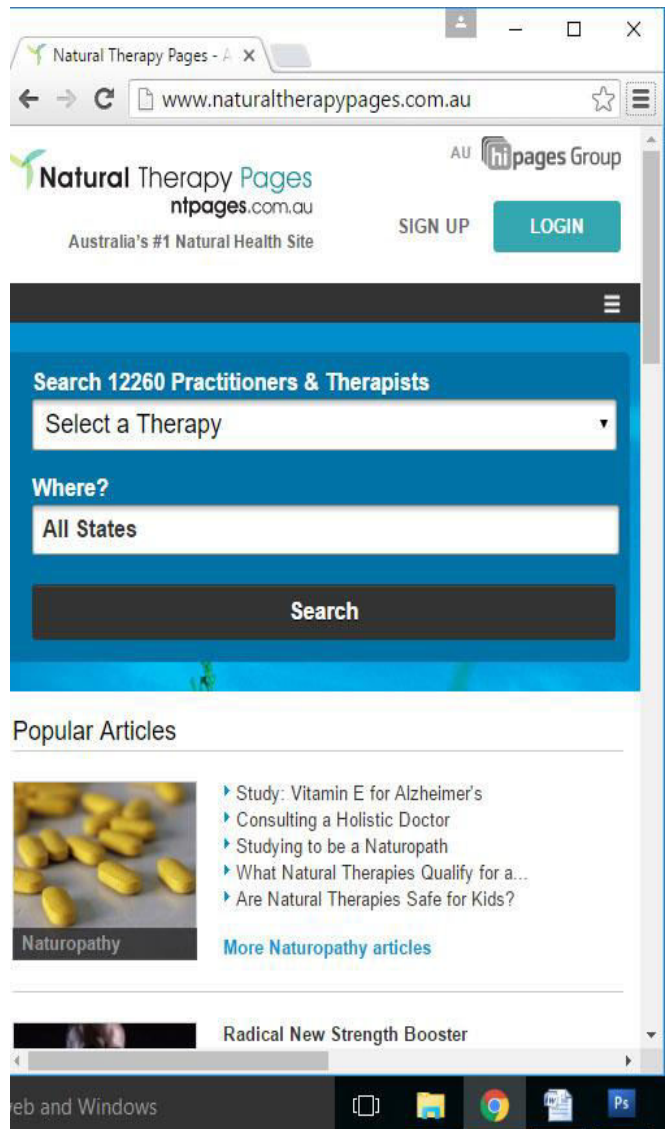

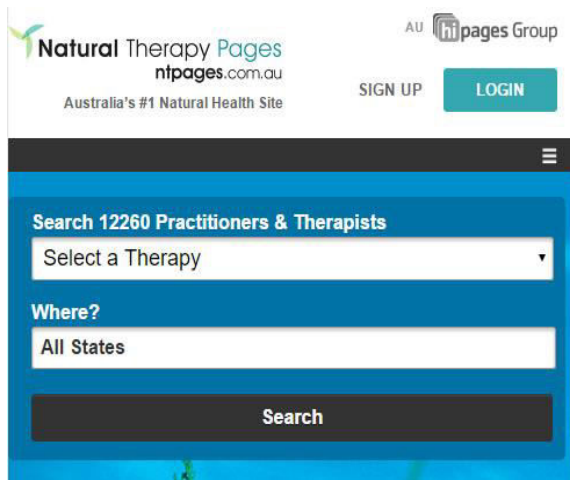

Browse by Therapies (desktop web) has too many items, I would rather change for **Therapies**.

Be aware of the limited height of the screen in mobile apps.

The following quick mockup can give you and idea of what I am thinking on (**desktop and wide screens**):

The following quick mockup can give you and idea of what I am thinking on (**mobiles and tablets small resolution**):

Breakpoints

As a Frontend Developer I always use the standard breakpoints provided by Bootstrap, which allows me to support a wide variety of screen resolutions. The following media-queries are widely used so far:

```
/* Custom, iPhone Retina */
@media only screen and (min-width : 320px) { }
/* Extra Small Devices, Phones */
@media only screen and (min-width : 480px) { }
/* Small Devices, Tablets */
@media only screen and (min-width : 768px) { }
/* Medium Devices, Desktops */
```

```
@media only screen and (min-width : 992px) { }
/* Large Devices, Wide Screens */
@media only screen and (min-width : 1200px) { }

/*===== Non-Mobile First Method =====*/

/* Large Devices, Wide Screens */
@media only screen and (max-width : 1200px) { }
/* Medium Devices, Desktops */
@media only screen and (max-width : 992px) { }
/* Small Devices, Tablets */
@media only screen and (max-width : 768px) { }
/* Extra Small Devices, Phones */
@media only screen and (max-width : 480px) { }
/* Custom, iPhone Retina */
@media only screen and (max-width : 320px) { }
```
